

A photograph of a man and a young boy in a greenhouse, harvesting tomatoes. The man, wearing a blue cap and a green apron over a blue and white plaid shirt, is handing a tomato to the boy. The boy, wearing a colorful plaid shirt, is holding a tomato. They are surrounded by rows of tomato plants. The image is partially covered by a large green circle and a smaller grey circle.

Better food, Better planet.

Sustainable solutions enabling people, planet and prosperity.

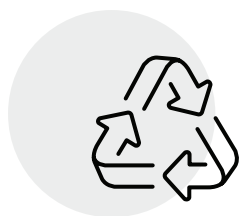

Sustainable infrastructure uplifts communities, restores and maintains a healthy planet and enables global prosperity. Now more than ever, employees, customers and key stakeholders also expect organizations to incorporate sustainable practices into the way they do business. Public and private sector leaders around the world are taking a stance and making sustainability and corporate environmental responsibility goals a critical part of their strategy and operations.

Every business is different. Sustainability is defined differently across geographies, industries, companies, and sometimes even P&L's and corporate groups. This can make sustainability complicated; we make it simple. We start by understanding your motivations and desired outcomes and then work back. We uncover the range of options you have to meet your goals. We ensure that the options you select can provide a pre-determined return on investment, making it easy to communicate the benefits of implementing your sustainability program.

Our talented subject matter specialists, global reach and expansive service offerings makes Black & Veatch the ideal partner to help establish benchmarks and develop sustainable solutions to help companies achieve both short and long-term goals.

BLACK & VEATCH

Services Offered

Whether you are in the process of establishing, benchmarking or executing your program, Black & Veatch can meet you where you are. We specialize in technologies and services that help clients meet their goals across the following categories:

Biodiversity
