

4 Steps to a Successful COVID-19 Testing and Vaccine Solution

Even as business operations begin to normalize around the world, the need for rapidly deployable COVID-19 testing and vaccination solutions remains urgent. Black & Veatch's Rapid Modular Health System (RaMHS) is answering the call.

Step 1 Sort out your needs

Knowing there's no one-size-fits-all approach, decision-makers in enterprises and communities big and small must begin with thoughtful deliberation about their requirements for a localized, mobile site. Rapid Modular Health System (RaMHS) units can be deployed at health-care sites, office parks, government locations, commercial and industrial businesses, retail locations and more. The starting line is basic: Determine whether the need is for testing, vaccine distribution or both. Budget considerations must be weighed, as does consideration about whether RaMHS would be best pressed into service as a transportable option for sporadic testing when flu season and other viruses take hold.

Step 2 Lean on Black & Veatch

Whether it's a RaMHS mobile unit on wheels — easily movable to other locations, reducing infrastructure costs — or a stationary module brought in, Black & Veatch has the answer tailored to your needs and proven to be effective. Reflecting its delivery of solutions, for example, the

RaMHS team plans to supply one of the world's preeminent cruise lines with multiple, canopied modular units equipped with full labs for on-site coronavirus screening, hastening their push to safely return to the seas. In addition, one of the world's biggest big box retailers has traditional modular RaMHS units supporting its distribution centers.

Step 3 Enjoy a full turnkey solution

If you're overwhelmed about sourcing all the staffing and equipment needed to make a broad screening and vaccination solution reality, don't be. Eliminating that hurdle, Black & Veatch is well-connected with proven partners ready to provide all screening, related lab work, inoculations and paperwork, ensuring a robust, comprehensive approach in unison with a client's time frame and agenda.

Step 4 Assess funding sources

Given the buffet-style assortment of RaMHS offerings, price points of the solutions may vary. But various governmental funding assistance is

available to help defray the cost, with Black & Veatch's team poised to help identify financial sources and offer insights about grant options and the process of applying for them.

Award-Winning Health Solutions

RaMHS has proven its value well past initial deployments as sites for controlled coronavirus testing outside of hospital emergency rooms and urgent care clinics where contamination risk was greatest. RaMHS units soon found homes at such varied places as schools, universities, meat-packaging plants and other industries, most recently serving as safe, secure locations for COVID-19 vaccinations.

Such urgent, outside-the-box thinking hasn't gone unrecognized: At the 2021 Edison Awards — widely likened to the Academy Awards of innovation — RaMHS won the coveted top prize in the "COVID-19 Innovations: Mobilizing for Emergency Response" category.
