

RaMHS Mobile Unit supports on the go health services.

Rapid Modular Health Systems (RaMHS)[™] Infrastructure by BV Health Solutions

RaMHS modular unit offers more long-term but still temporary infrastructure.

BV Health Solutions offers secure site-based infrastructure, customized with technology and innovation, that comes in multiple forms. Engineered as a best-in-class framework for managing population health, telehealth, and safety, BV Health Solutions enables health care where and when it is most needed. Our RaMHS units are a mobile and modular solution that provides infrastructure for a variety of health services and needs.

Our solutions allow clients to overcome space constraints at their facilities and deliver their services directly to their patients. The modular option is semi-fixed and can be utilized for long or short term solutions. The mobile RaMHS option is perfect for clients who need to take their services to multiple locations. Layouts can include an office, a clinic or exam room, and a full laboratory option.

The RaMHS units can be leveraged in a variety of ways including:

- Medical exams and services
- Imaging and screening
- Education and outreach
- Immunization clinics
- Laboratory testing

RaMHS units contain the supporting equipment to store and maintain medical supplies, testing samples, and vaccines. All RaMHS units are 4G wireless enabled, secure, temperature-controlled, and customizable for staff comfort and organizational branding. They also come with a built-in pure sine wave gasoline generator and air purification system. The units can be customized with a variety of layouts, equipment, and diagnostic devices meet any specific needs or we can design something brand new.

Learn more by contacting us at RaMHS@bv.com or reach out to Ashley Stroud at StroudA@bv.com.

Our infrastructure can also be applied to other industries such as Digital Equity.
